

We are seeking a 50% GSR for Summer 2023 to support a project focused on increasing sense of belonging in field research (e.g. biology, ecology, sociology), including enhancing the likelihood of incorporating conservation and climate science into a diverse student population's career trajectory.

Job responsibilities could include:

- Assisting with data management and statistical analysis related to the development, testing, and refinement of an assessment tool to quantify changes in "sense of belonging" in field research careers
- Preparing written and visual materials for publications and trainings
- Collaborating with the UC Merced Natural Reserve System staff to produce materials showcasing and describing the evidence-based field research curriculum
- Producing written and visual materials for presentations and trainings
